NUMEK · DATATRUST

Text Reliability Intelligence

2 evidence-qualified findings; required checks completed over applicable records. Bounded investigations disclose their examined scope.

Schema 1.5 · text_reliability_v1 · 2026-10-11T13:03:01.642552+00:00

1. Summary and actionability

Deterministic violations, contextual observations, heuristic candidates and model-assisted candidates have distinct meanings. This audit provides no universal score or correctness certificate.

Covered source characters union	0
Declared parent characters	0
Extractive character coverage	Unavailable
Unknown judgment is negative	No
Transformed chunk alignment claimed	No

7. Comparisons and model evidence

No applicable evidence in this topic. See check applicability and coverage in strict JSON.

8. Methods and coverage

Required checks cover framed records and valid applicable mapped items. Invalidity remains counted. Vocabulary, lexical, passage and semantic investigations disclose selected scope. Approximate candidate search and work bounds can miss qualifying pairs. Template overlap and related document families require context.

Use the separate protected manifest and unchanged local sources to resolve opaque references. Sources and private paths are excluded from these exports. Privacy defaults do not make aggregates anonymous.

Lexical Selection

Framed records	1,659
Invalid records	0
Content population	1,659
Valid applicable population	1,659
Eligible population	1,659
Selected population	128
Selection	evaluation priority then seeded stratified round robin v1
Seed	0

Strict JSON retains all bounded details, selected strata, effective limits and methodology. Human tables summarize nested collections and show at most five entries; retained witness examples show at most two per family.
