NUMEK · DATATRUST

Text Reliability Intelligence

3 evidence-qualified findings; required checks completed over applicable records. Bounded investigations disclose their examined scope.

Schema 1.5 · text_reliability_v1 · 2026-10-11T13:03:06.079616+00:00

1. Summary and actionability

Deterministic violations, contextual observations, heuristic candidates and model-assisted candidates have distinct meanings. This audit provides no universal score or correctness certificate.

Declared parent characters	0
Extractive character coverage	Unavailable
Unknown judgment is negative	No
Transformed chunk alignment claimed	No

7. Comparisons and model evidence

No applicable evidence in this topic. See check applicability and coverage in strict JSON.

8. Methods and coverage

Required checks cover framed records and valid applicable mapped items. Invalidity remains counted. Vocabulary, lexical, passage and semantic investigations disclose selected scope. Approximate candidate search and work bounds can miss qualifying pairs. Template overlap and related document families require context.

Use the separate protected manifest and unchanged local sources to resolve opaque references. Sources and private paths are excluded from these exports. Privacy defaults do not make aggregates anonymous.

Lexical Selection

Framed records	11,873
Invalid records	0
Content population	23,746
Valid applicable population	23,746
Eligible population	23,746
Selected population	128
Selection	evaluation priority then seeded stratified round robin v1
Seed	0
Representation	nfc
Excluded for length	0
Excluded for unit budget	23,618
Population estimate	No
Retained selected strata	4

Repetition

Examined units	128
Grapheme visits	73,513
Stop reason	selected scope completed
Population and selection	Same catalog, strata and seed as lexical selection above; additional method exclusions are listed here

Vocabulary

Examined units	128
Token occurrences	13,856
Stop reason	selected scope completed
Vocabulary is lower bound	Yes
Population and selection	Same catalog, strata and seed as lexical selection above; additional method exclusions are listed here

Near Duplicates

Candidate search	exhaustive selected unique units
Unique candidates	153
Candidate emissions	153
Omitted bucket emissions	0
Pair selection	requested evaluation then evaluation training then other requested then remaining v1
Indexed unique units	18
Excluded unique units	106
Shingle positions	8,670
Signature hash evaluations	997,780
Verified pairs	153
Unverified candidates	0
Verification visits	121,159
Candidate recall on this corpus	complete over indexed units
Global absence claim	No
Population and selection	Same catalog, strata and seed as lexical selection above; additional method exclusions are listed here
Candidate profile	20 bands × 7 rows; bucket cap 1024; calibration applies only to recorded fixtures

Passages

Representation	raw
Indexed units	128
Excluded units	0
Fingerprint work	73,001
Candidate emissions	7,491
Potential bucket emissions	10,611
Verified candidates	7,491
Verification visits	572,221
Stop reason	examined fingerprints completed
Candidate recall on this corpus	unknown
Global absence claim	No
Population and selection	Same catalog, strata and seed as lexical selection above; additional method exclusions are listed here

Strict JSON retains all bounded details, selected strata, effective limits and methodology. Human tables summarize nested collections and show at most five entries; retained witness examples show at most two per family.
