NUMEK · DATATRUST

Text Reliability Intelligence

2 review actions across 3 technical findings. Required checks retain invalidity; bounded searches disclose their examined scope.

Schema 1.5 · text_reliability_v1 · 2026-10-11T13:24:02.327862+00:00

1. Summary and actionability

Observed population: 10 framed records across 1 sources; 14 content units. 2 invalid records and 9 invalid items remain accounted for. Content states: empty: 1; invalid: 2; null: 2; present: 9.

Review priorities

Invalidity deterministic violation
full population: 9 items. Resolve retained invalidity witnesses, repair the applicable record or mapping, and re-audit the original preserved source.

Exact Duplicates contextual observation
nfc: 2 groups; raw: 2 groups. Review split assignments and legitimate shared content before removing or moving any occurrence. Representation counts overlap and are not added together; distinct evidence is retained below.

Examined and unanswered scope

- Required checks accounted for 10 framed records; 2 invalid records remain in the population.
- Lexical selection examined 10 of 10 eligible units; each investigation has its own additional work limits.
- Semantic investigation embedded 9 of 9 eligible parents in 14 windows; segment similarity does not establish document equivalence.
- Approximate or bounded searches can miss qualifying evidence. Unknown judgments and unavailable annotations do not become negatives or clean results.

Review declared violations before contextual overlap and similarity candidates. This ordering is not a severity score, correctness certificate or contamination verdict.

8. Methods and coverage

Required checks cover framed records and valid applicable mapped items. Invalidity remains counted. Vocabulary, lexical, passage and semantic investigations disclose selected scope. Approximate candidate search and work bounds can miss qualifying pairs. Template overlap and related document families require context.

Use the separate protected manifest and unchanged local sources to resolve opaque references. Sources and private paths are excluded from these exports. Privacy defaults do not make aggregates anonymous.

Private evidence binding: `8f2b32358866c8e3bf4167e6e7f37c6286c3b27cc4ea642fd524365c6b31fbfa`

Strict JSON retains all bounded details, selected strata, effective limits and methodology. Human tables summarize nested collections and show at most five entries; retained witness examples show at most two per family.
